

TRADE WASTE ESTIMATOR GUIDE AND TOP TIPS

Always consider and plan for your long-term business goals and anticipated peak production volumes when planning your waste management systems to ensure you are meeting compliance obligations now and into the future

Unless proven otherwise, regulatory agencies will use the assumption that on average for every 1L of beverage product produced, up to 5L of trade waste will be generated*

If discharging to land is an option, an average of 1 hectare of land to manage the waste from 200kL (200,000L) of beer produced. **Calculation: Area (ha)=annual beer production (kL)/200**

(noting discharge to land may be limited seasonally and you may need to consider and plan for trade waste storage during wet seasons)

*Based on current WA licence reporting averages for beer production
